**Subject:** Comment letter: Salton Sea

Jeanine Townsend:

Ground cover is the critical issue to keep the toxic playa from becoming airborne resulting in the horrible health problems when the evaporation of the Salton Sea is accelerated by the Quantification Settlement Agreement.

We need an aggressive program searching for "salt loving plants" called "Halophytes" which will thrive in the brackish environment at the Salton Sea. Bruce Wilcox is familiar with this concept. Keeping the playa on the ground is the essential factor to mitigate death and disease from the carcinogenic soil.

I am available for consultation on this subject which I have researched extensively and presented to the Technical Advisory Committee of

the Salton Sea Authority should you wish my input.
